

Project overview

This is an engineering proof of concept. The goal is to exercise the Spring MVC technology according to “company” guidelines to validate its use in future projects.

A group consists of 3~5 members. Not every student has the same grade in a team depends on your own work.

Or you can choose to do project alone, but your work must compare with 3 students’ work, I’ll evaluate your project as a team not a single person.

For students who took CS545 WAA course before, you cannot use the same project. Must create a new one to be fair with other students.

After you decide, your team must review your project ideas and feature with me to make sure each developer has enough work.

Project Subjects if you don’t have idea

Dating Application:

Dating has become a sign of romantic relationships. In today’s global market, with the use of modern technology, people can easily date through dating app. This app allows the user to find a significant other and the user needs to provide the information about them. It helps the user to find the perfect match of their choice.

Car Parking Spots:

Increase in the vehicle use has also increased the traffic in the parking During rush hours the user can easily access parking spots which are near to them. This parking app will enable users to find a parking spot according to GPS which is not taken by any other driver.

Restaurant Reservation:

With this web app, any user can easily book a specific table ahead of time. For the sudden plan, this app will be a huge support to the people who want to dine at great restaurants or pubs.

Health Care:

Every person needs a doctor for their health checkup. In their busy lives, they often forget to make an appointment with the doctor and miss their regular health checkup. This app will help these people to make appointments for themselves even they are in rush. They can easily fill in details and choose an appointment near their locations.
